Workshop „Mathematik in Forschung und Lehre“ 2018

Development of a noninvasive brain controlled muscle stimulation system

Marcus Löffler

Contents

- Motivation
- Idea
- Development
- Conclusion

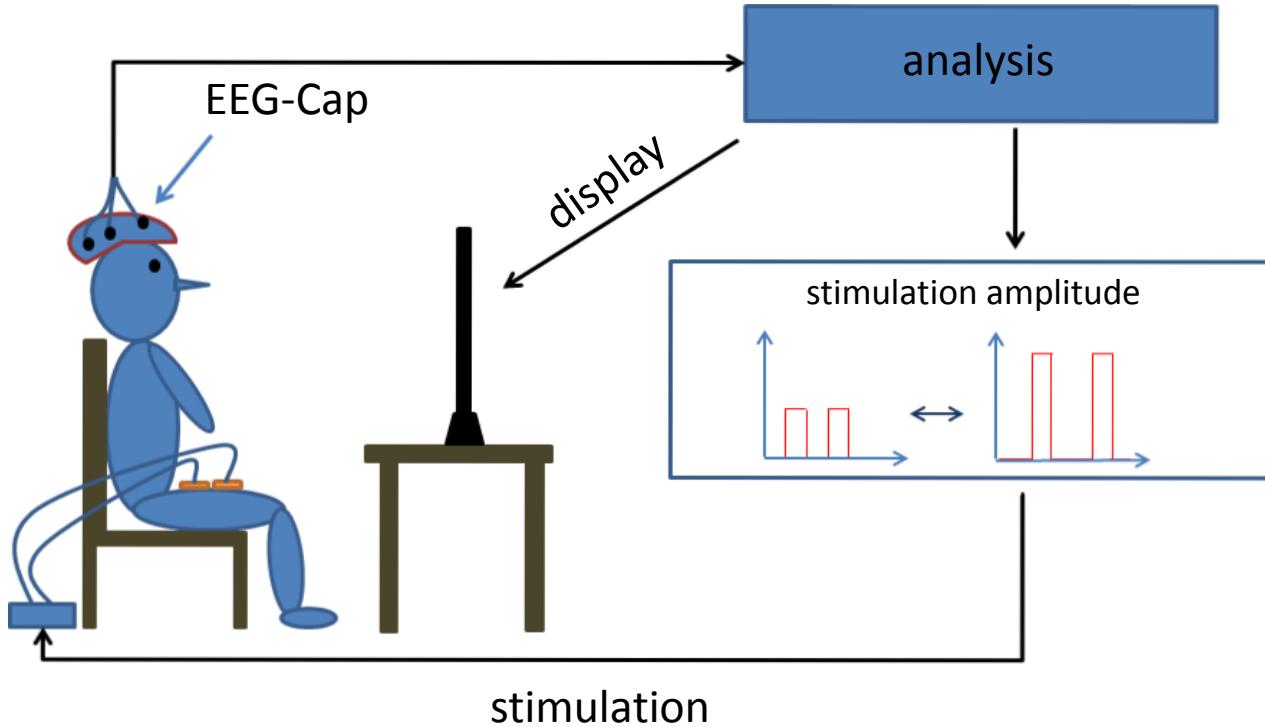

Motivation

- 18,000 people suffer from spinal cord injury every year [1]
- 270,000 people suffer on stroke every year [2]
- physiological and psychological changes can occur [1-3]
- motor disorders, progressive reorganization process in brain [1,4]

Plasticity of the brain

Research question : Is it possible to influence this process positive?

Idea

Development – Main topics

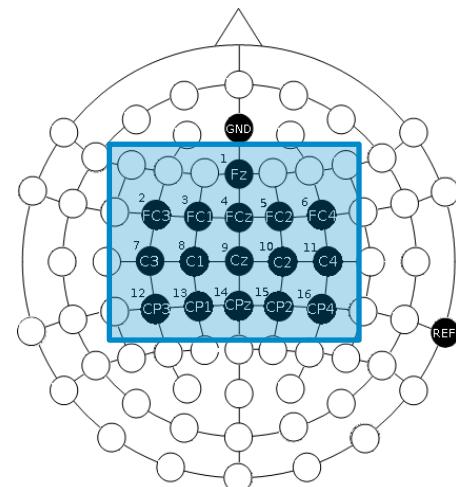

1. Extract the movement with electroencephalogram (EEG)
 - Study literature → Event Related Desynchronization (ERD) and Event Related Synchronizations (ERS)
 - Study with healthy participants and offline evaluation of ERD
 - Feature extraction for online analyses (**Mr. Wetzel**)
2. Muscle activity during different movements
 - Study with healthy participants and evaluation of muscle activity with electromyography (EMG)
 - Analyze the activity of muscles during specific part of movement
3. Development of a flexible muscle stimulation system

Development – EEG-Results

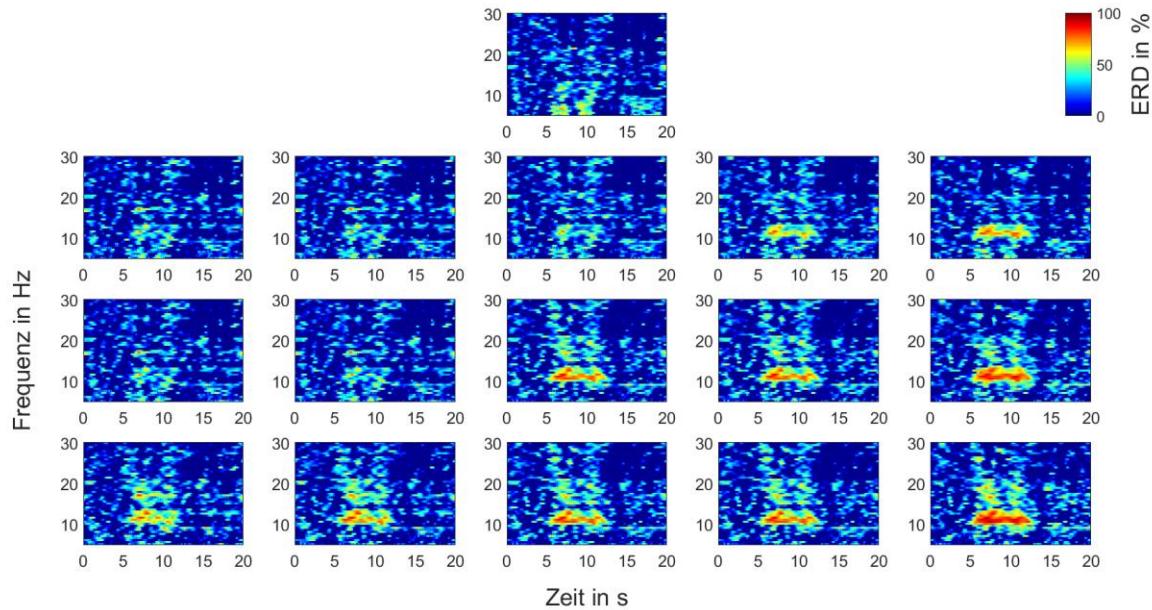

Event related desynchronisation (ERD)

$$ERD = \frac{Leistung_{ref}(f) - Leistung(f,t)}{Leistung_{ref}(f)} \quad (1)$$

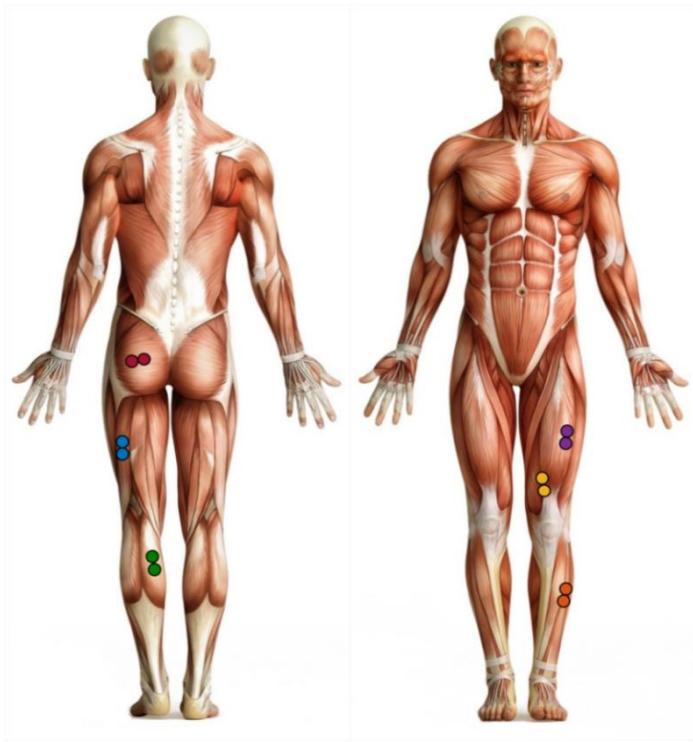

Subject 4: Movement

T. Carlson, J.R. Millán, IEEE Robotics & Automation Magazine 20, 65-73 (2013).]

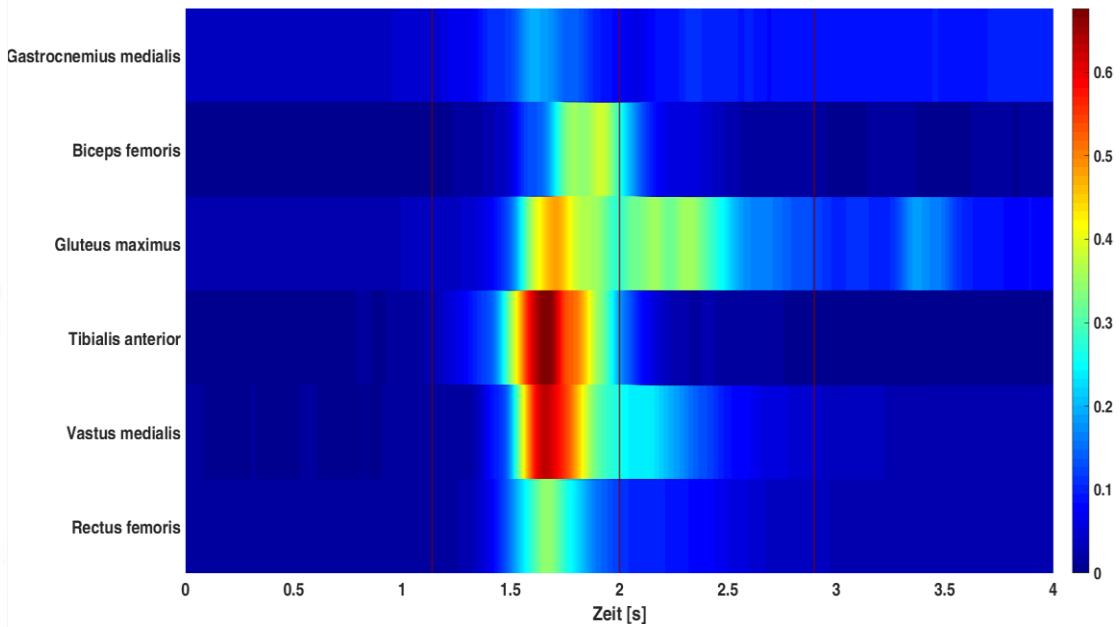

Development – EMG-Results

Aufstehen

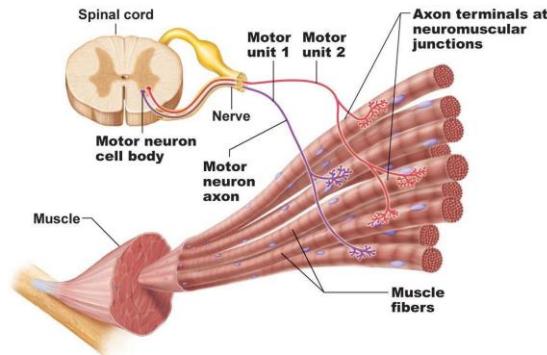

Development – Concept

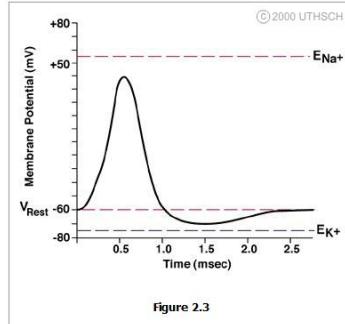

- Development of a system which combines the Brain Computer Interfaces with Functional Electrical Stimulation

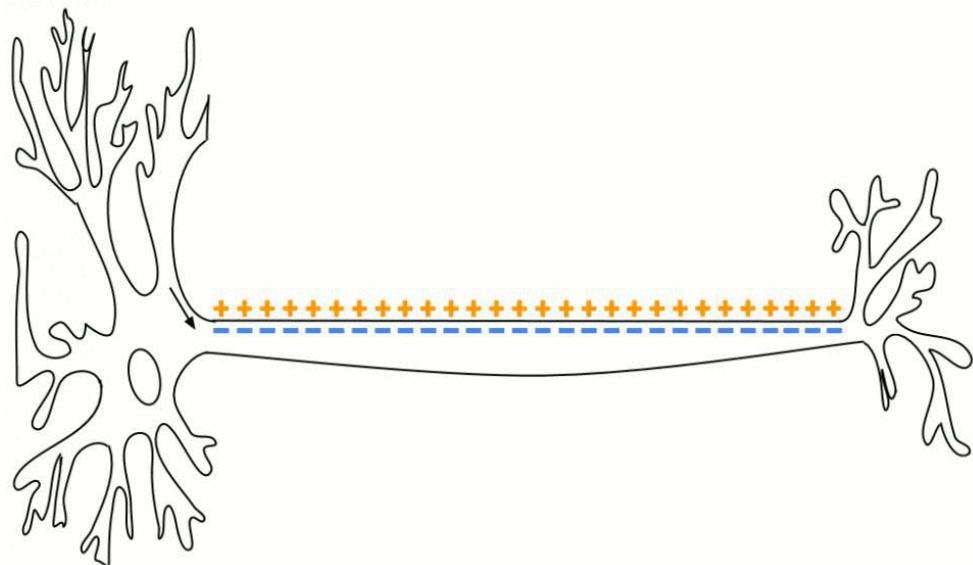

Development – Pulse shape

source: <https://cdn.netzathleten.de/images/-Muskelkontraktion/Muskel-Struktur.jpg>

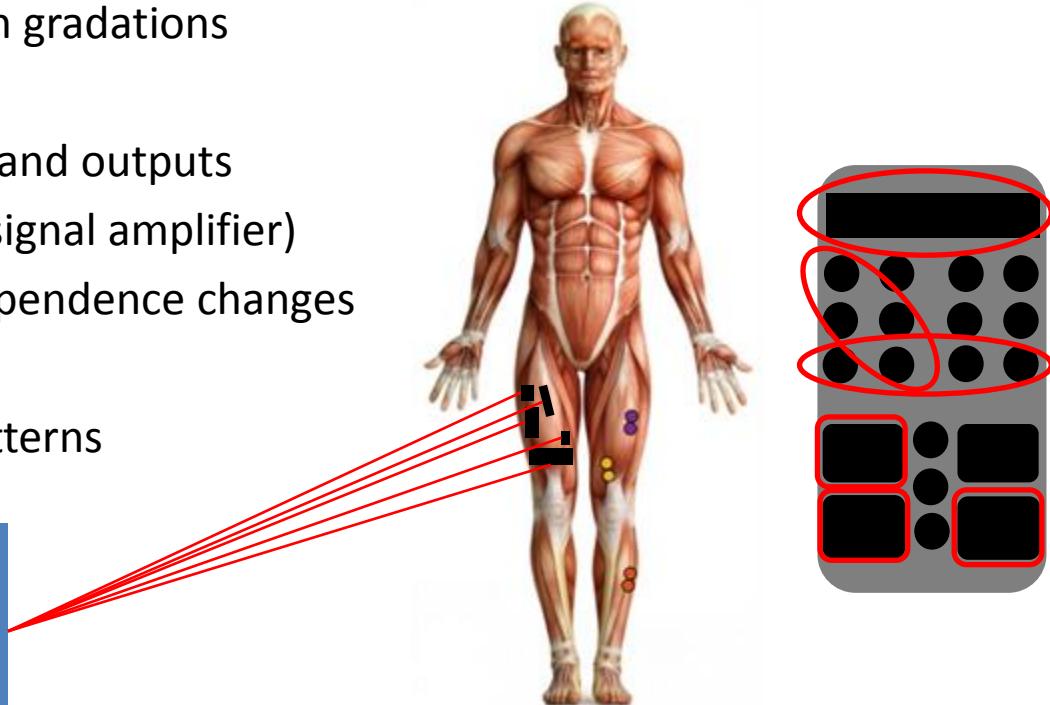

source: <https://nba.uth.tmc.edu/neuroscience/>

source: https://upload.wikimedia.org/wikipedia/commons/9/95/Action_Potential.gif

Development – System conditions

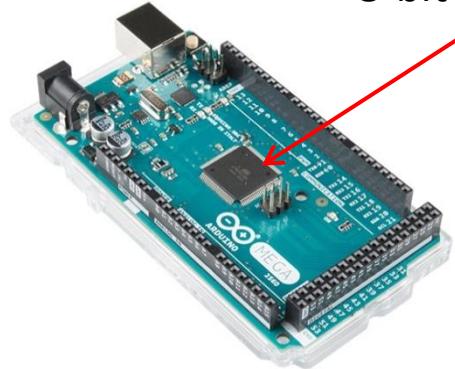

- Biphasic pulses to avoid constant ion gradations
- Wide range of possible frequencies
- Fast and flexible system different in and outputs
- Connectable to other systems (e.g. signal amplifier)
- Constant current even if the skin impedance changes
- Multiple channels
- Fast configuration of stimulation patterns
- Safety

www.letsbands.com

Development – Hardware

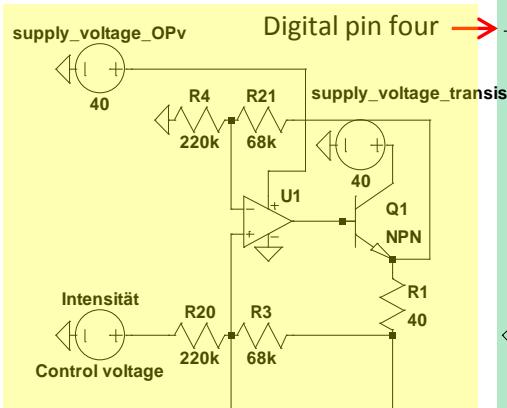

8-bit Atmel 2560

source: [5]

source: [6]

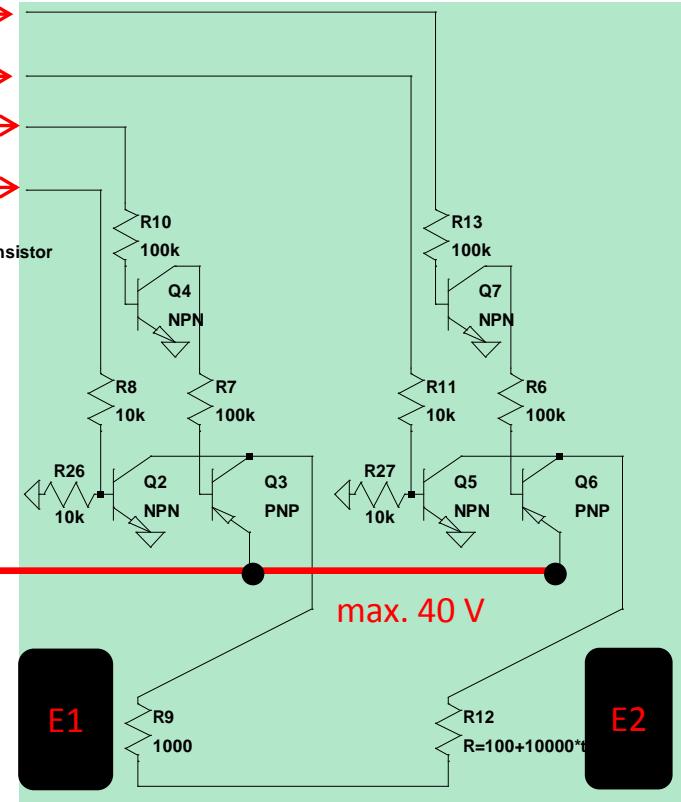

Digital pin one →

Digital pin two →

Digital pin three →

Digital pin four →

source: [7]

Development – Software

Pulse generation

- Output compare interrupt (OCI) of Timer/counter one
 - Interrupt service routine (ISR)

ISR:

Setting the digital pins HIGH or LOW by the use of the general purpose registers

Bit
(0x81)
Read/Write
Initial Value

Pulse width :

```
noInterrupts();  
TCCR1A = 0;  
TCCR1B = 0;  
TCNT1 = 0;  
OCR1A = 1600;  
TCCR1B = ( 1 << CS10 );  
TIMSK1 = ( 1 << OCIE1A );  
interrupts();
```

Four registers regulate: pulse width, frequency

1. Timer/Counter (TCNT1)
2. Timer/Counter Control Register (TCCR1B)
3. Output Compare Register (OCR1A)
4. Timer/Counter Interrupts Mask Register (TIMSK)

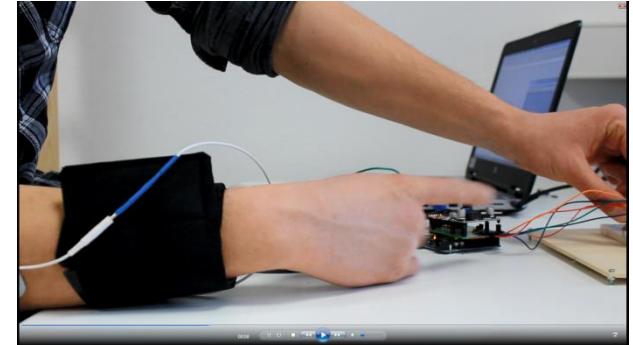

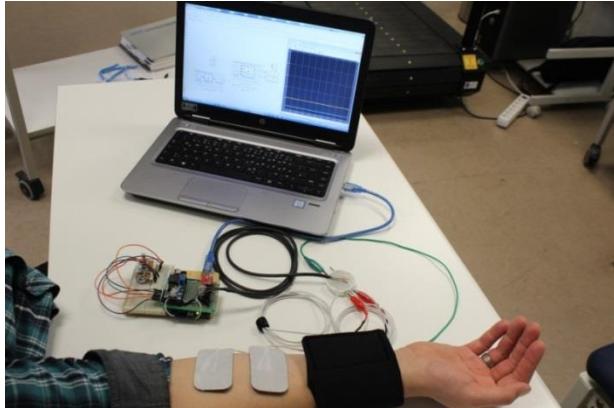

7	6	5	4	3	2	1	0
ICNC1	ICES1	-	WGM13	WGM12	CS12	CS11	CS10
R/W	R/W	R	R/W	R/W	R/W	R/W	R/W

Table 17-6. Clock Select Bit Description

CSn2	CSn1	CSn0	Description
0	0	0	No clock source. (Timer/Counter stopped)
0	0	1	clk _{I/O} /1 (No prescaling)
0	1	0	clk _{I/O} /8 (From prescaler)
0	1	1	clk _{I/O} /64 (From prescaler)
1	0	0	clk _{I/O} /256 (From prescaler)
1	0	1	clk _{I/O} /1024 (From prescaler)
1	1	0	External clock source on Tn pin. Clock on falling edge
1	1	1	External clock source on Tn pin. Clock on rising edge

Development – First prototype

Developed setupd generator

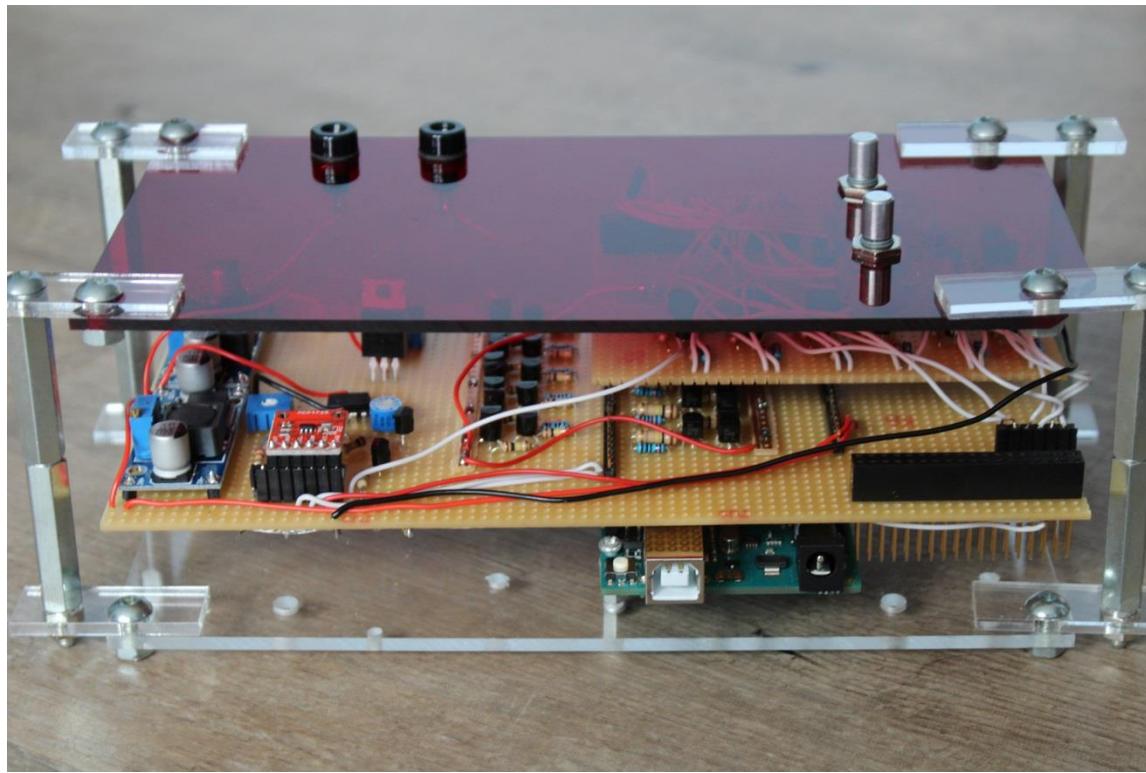

MVI_0955.mp4

- 4 channels
- Good stimulation performance

- Able to change stimulation parameters
- Connectable with the EEG

Development – Second prototype

20180904_113819_edit.mp4

Conclusion

Results

Offline analyses of EEG and EMG
on healthy participants

Next steps

Combine online feature extraction with
muscle stimulation system

Stimulation prototypes were build

Improve prototype hard- and software,
programming user interface,

Tested the prototype on us

Test the prototype with healthy
participant

Thanks

Thank you for your attention

&

I'm happy to answer your questions
